

Required Data

What documents are required for a safety assessment?

To create safety reports including safety assessments for your products, we require the following documents in German or English:

- Qualitative and quantitative formulation
- Manufacturing procedure
- Toxicological data of the used raw materials:
 - including testing for acute toxicity (cytotoxicity)
 - Testing of skin, mucous and eye irritation
 - Testing for sensitization (contact allergy)
 - Testing of skin penetration
 - Mutagenicity study
- Product and safety data sheets and certificates of analysis of the raw materials used, information about impurities
- INCI declaration- listing ingredients
- Results of the chemico-physical testing (test specification) of the final product
- Results of the storage stability tests
- Results of the microbiological tests (Preservative challenge test; in-use studies)
- Dermatological tolerance tests on the finished product
- Certificate of conformity of the perfume oil (separate safety assessment of the manufacturer) as far as contained
- Details of packing materials
- Original sample or product label and product claims
- Complaints Statistics (if available)

In order to create a safety assessment, we need numerous documents. Should not all toxicological data be available, the documents can be completed by researches of us.
